

1.6 Integrate Elastic with Threat Intelligence platform (Abuse.ch)

At first Go to Stack Management >> API keys >> Create API keys >> name it **abuse-CTI** and copy the key value

API keys

Allow external services to access the Elastic Stack on behalf of a user.

✓ Created API key 'abuse-CTI'

Copy this key now. You will not be able to view it again.

Encoded bkNDb3Nwb0J6NThjU1VTa0ZxRmQ6T3N0c29l

Search...

Personal Managed Owner 3

Name	Type	Owner	Created	Status
abuse-CTI	Personal	elastic	Just now	Active

then :

- 1- Go to Fleet >> Agent Policies
- 2- click on Create agent policy button
- 3- search on Abuse.ch integration
- 4- add integration
- 5- Go to Edit integration and Enable Collect abuse.ch logs via API and put API key that you copy it into **Auth key** field

< Cancel

Edit abuse.ch integration

Modify integration settings and deploy changes to the selected agent policies.

Integration settings

Choose a name and description to help identify how this integration will be used.

Integration name: ti_abusech

Description: elastic

> Advanced options

☒ Collect abuse.ch logs via API

Change defaults

Settings

The following settings are applicable to all inputs below.

Auth Key

The saved auth key is hidden. You can only replace the auth key.

Replace auth key

abuse.ch Auth Key. This is required for authentication for all API requests. See documentation for details.

Learn more about policy secrets.

> Advanced options

Now Elastic automatically fetch Public feeds from :

- MalwareBazaar
- ThreatFox
- URLhaus
